

A BREATH OF FRESH AIR (Literally!)

At Stone Martin Builders, giving you the healthiest home possible is our highest priority. And clean, fresh air is at the top of the list. Even though our homes are designed and insulated to be airtight, we utilize fresh air exchange technology, whole house dehumidifiers, and green building techniques to ensure you always have clean, fresh air.

- 🌿 Each of our homes is airtight, but well ventilated.
- 🌿 Each home has an HVAC system that constantly exchanges clean air.
- 🌿 We use SucraSeal™ foam insulation, which is USDA BioPreferred®.
- 🌿 Each home is air-sealed with low-expansion foam & caulking on all top plates and jack studs.
- 🌿 All kitchens and baths have fans that directly vent stale or humid air out of the house.
- 🌿 The sound and moisture control glue used for flooring and ditra is VOC compliant.

***The need for healthy air quality –
and peace of mind – has never been greater.
You can trust us to give you both.***

We also offer NPBI® air purifiers by GPS® as an upgraded feature. This cutting-edge technology cleans & filters the air with ions, replicating nature's formula for cleaning the air we breathe outside. It can eradicate allergens, viruses and pathogens, and is ozone-free. Learn more at GlobalPlasmaSolutions.com.
