

LANDSCAPING | IRRIGATION GUIDE

WATERING SCHEDULES

Here are recommended watering schedules by season for established landscapes and depending on rainfall.

- **Spring (March, April, May) | 3x/week**

Drip Irrigation: 20-40 minutes

Pop-up heads: 10-15 minutes

Rotors: 20-25 minutes

- **Summer (June, July, August) | 3-4x/week**

Drip Irrigation: 25-30 minutes

Pop up heads: 10-20 minutes

Rotors: 30-45 minutes

- **Fall (September, October, November) | 2-3x/week**

Drip Irrigation: 20-25 minutes

Pop-up heads: 10-15 minutes

Rotors: 20-25 minutes

- **Winter (December, January, February) | 1-2x/week**

Drip Irrigation: 20-25 minutes

Pop-up heads: 10-15 minutes

Rotors: 20-25 minutes

Adjust irrigation heads and watering schedules according to grade changes, shade locations, and water restrictions. Water restrictions do not apply to drip irrigation; you may continue to use drip irrigation, unless otherwise noted by your city.

Trees and plants should be cared for as recommended. Your irrigation system is equipped with a rain/freeze sensor, there is no need to shut it off.

UNDERSTANDING YOUR IRRIGATION SYSTEM

- **Drip Irrigation:** This is the brown tubing usually in the beds, parkways, and sometimes around the foundation. It requires a longer run time based on gallons per hour.
- **Pop-up heads:** These are black, 4" sprinkler heads, usually in turf or grass areas. These do not require as much run time, based on gallons per minute.
- **Rotors:** These are large sprinkler heads made to cover large turf areas. They require longer run time, based on their larger coverage areas.
